

THE BETTER FLOATING FOUNDATION

LIGHTWEIGHT

18X lighter than cement footings—each BLOCK only weighs 2.16 lbs. Plus, they nest together so that you can transport them easily in any vehicle.

STRONG

Each BLOCK is load rated to support 1800 lbs, making them stronger than cement footings.

SUSTAINABLE

CAMO BLOCK is made from recycled material and can be recycled when it's at the end of its life.

LONG-LASTING DURABILITY

The UV-protected BLOCK comes with a 30-year warranty, will not chip, crack, or corrode, and is vented to prevent water build-up, rot, and mold.

VERSATILE

BLOCK works with 4x4 and 6x6 posts, 2x4, 2x6, or 2x8 wood joists, and 2 in. metal joists in a variety of projects, including low-profile decks from 5-1/2 in. to 5 ft. tall*.

EASY TO INSTALL

No digging or chipping out slots to fit a joist—BLOCKS are simple and fast to place and reposition. You can install them on uneven ground, and the cold-weather-approved BLOCK resists frost heave.

Floating decks under 30" and smaller than 200 sq ft typically do not require building permits, but always check with your local building code official before starting any building project.

USE BLOCK FOR VARIOUS EXTERIOR PROJECTS

- Rooftop decks
- Landings
- Walkways
- Dog houses
- Sheds
- Pools

STORE EXPERIENCE

CAMO BLOCK VS. CEMENT FOOTINGS

- Easier to transport—for instore associates and customers
- Removes sales limitations
 - Can be sold online
 - Standard shipping
- Added solutions: 6x6 posts and metal joists
- Reaches new installation locations, such as urban roof tops
