

BUILDING YOUR DECK BETTER WITH CAMO®

You're investing in a high-end composite deck that will require very little maintenance over its lifetime. We use the CAMO fastening system to ensure it gets installed to the highest standard and will provide you with peace of mind.

EFFICIENT AND SAFE INSTALLATION

You want to enjoy your deck as soon as possible. That's why we use this system that allows us to install your deck top in a matter of hours— and do it well. Additionally, it's the safest way for our crew to install. Instead of balancing on joists while fastening, we can comfortably stand on a field of boards that are locked in place, giving you one less thing to worry about.

UNMATCHED STRENGTH

The clips we use to secure your deck boards are up to 88% stronger than other clips in reducing lateral movement and up to 50% stronger in uplift holding power. That means your boards aren't budging. Plus, they are made with Stainless Steel to resist corrosion and hold up to the elements.

PICTURE-PERFECT DECK

The clips we use set the recommended 3/16 in. spacing between boards that allow for expansion, contraction, and drainage for a clean deck top. They also cover the joist entirely for a seamless finish.

Clips Are Backed by a **CAMO Warranty**
And if you ever need to replace a board,
it's easy for us to do that too.

Rely on us to build your deck better than the rest.
