

FRAMING

Don't trust your framing to nails or deck screws - use code-compliant CAMO® Framing Screws for better holding power and stronger connections. These screws are specifically designed and load-rated for interior and exterior framing applications.

PROTECH® ULTRA 4 COATING INDUSTRY LEADING COATING SYSTEM

Our proprietary PROTECH Ultra 4 four-layer coating system protects your connections against the harshest environmental elements. Each layer works together to provide optimum corrosion resistance, UV and environmental protection, and torque reduction for a high-performing, long-lasting screw. Tested in accordance with ASTM G198, the coating meets or exceeds the protection of code-approved hot-dip galvanized (ASTM A153, Class D) in ground contact general use pressure treated lumber (AWPA UC1-UC4A).

**LAB TESTED
HIGHEST
RATED COATING**

Our coating is tested 2X longer than industry standard - so you can be confident your connections will last.
